

Earth Layers Diagram

- A. Crust (Rigid) – composed of igneous, metamorphic, and sedimentary rocks.
- B. Mantle – (mostly ridged) igneous magma
- C. Outer Core – (liquid) metallic generates Earth’s magnetic field.
- D. Inner Core – (solid) metallic iron and nickel.
- E. Lithosphere – (ridged) outer layer of Earth, including the crust and upper mantle.
- F. Asthenosphere – (plastic) upper layer of mantle easily deformed where convection takes place.
